## PROFESSIONAL PROFILE

Results-driven Systems Engineer with over 10 years of experience across Linux middleware, cloud-native platforms, and embedded systems. Proficient in C++ and Go, with a pragmatic, language-agnostic approach to solving complex engineering challenges. Proven track record delivering production-grade software at scale for global organisations including Microsoft, Extreme Networks, and Siemens Healthcare.

## PROFESSIONAL EXPERIENCE

### Senior Software Engineer – Cloud Platforms (PaaS)

Mar 2021 – Present

Microsoft · Azure for Operators (A4O) | March 2021 – Present

- Develop and maintain networking and observability agents for Unity Cloud, a cloud-native virtual network function (VNF) product on Azure.
- Implemented service-mesh agents (Istio) for load balancing, DNS resolution, and circuit breaking, improving platform resilience.
- Built OpenTelemetry agents for end-to-end metrics collection and distributed tracing across microservices.
- Contributed to a Redis client library used across multiple internal services.
- Product reference: Azure Private 5G Core ([azure.microsoft.com/products/private-5g-core](https://azure.microsoft.com/products/private-5g-core)).

### Software Engineer – Cloud Platforms & Data Access

Feb 2019 – Feb 2021

Extreme Networks · Cloud Platforms Engineering | Feb 2019 – Feb 2021

- Designed and implemented the data access layer (DAL) for TierraOS, a cloud-native device operating system.
- Contributed to manageability features for SLX-OS on the SLX series of data-centre routers.

### Software Engineer – QNX Middleware

Feb 2017 – Jan 2019

Siemens Healthineers | Feb 2017 – Jan 2019

- Worked on the Artis Zee X-ray angiography system within the movement-control (MC) sub-system.
- Developed middleware components in a safety-critical, real-time QNX environment.

### Software Developer – MFC UI & Linux Middleware

Aug 2015 – Jan 2017

Power Research and Development Consultants (PRDC) | Aug 2015 – Jan 2017

- Developed front-end (MFC) and back-end (Linux middleware) features for MiPower, a power-system simulation suite.
- Worked extensively with C++ (MFC, STL) in both UI and systems-level contexts.

## TECHNICAL SKILLS

|                |                                                                               |
|----------------|-------------------------------------------------------------------------------|
| Languages      | C++ (Boost) · Go — Proficient   C# (.NET) · Python · Bash — Working knowledge |
| Build Systems  | CMake · Bazel                                                                 |
| Infrastructure | Linux (POSIX, GNU, Networking) · Docker · Kubernetes (Operator SDK)           |
| Networking     | gRPC · Service Mesh (Istio) · DNS · Load Balancing · Circuit Breaking         |
| Observability  | OpenTelemetry (Metrics & Tracing)                                             |
| Databases      | Redis · MongoDB · PostgreSQL                                                  |

## EDUCATION

Bachelor of Engineering – Electrical Engineering

R.N.S. Institute of Technology (RNSIT), Visvesvaraya Technological University (VTU) | Aug 2011 – Jul 2015  
Graduated with First Class with Distinction (71%) · Recipient of Best Final Year Project Award.
